Brunelli Federico

Front-end developer

ABOUT ME:

My name is Federico Brunelli and I'm a self taught front-end development student. I have been working as delivery driver for the last 2 years and I'm currently studying full-time as my Kurzarbeit recently started.

I'm experienced with **HTML5, CSS3, Javascript and ReactJs.**

I'm in constant development, studying new technologies focused to start programming mobile applications and strengthening my web-development skills.

WHAT I'M LOOKING FOR:

My main interest from my first job is to be part a young and talented team from whom I can learn about a wide range of subjects related to digital technology.

The option to work remotely after the learning-stage is also important for me.

WHAT I'VE LEARNED:

I've been independently studying online for 8 months. My main source of education comes from Codecademy and the consolidation of new skills learned through personal projects.

Working on my own ideas has led to the integration of my development skills with other UI design courses.

A FEW OF THE CLASSES I'VE BEEN FOLLOWING :

Create a Front-End App with React on Codecademy (http://tiny.cc/vgggsz),

The Responsive Web Design Bootcamp on Scrimba (https://bit.ly/2CwfJUC),

Complete Web Design: from Figma design to Webflow development on SkillShare (http://tiny.cc/xfggsz)

3 PROJECTS I'VE BEEN WORKING ON :

Study Timer
https://study-timer.com/

I developed this simple time tracking app in a week. I started from zero, designed, coded and deployed the app fully independently. *I'm also planning to create a back-end to store all the user data and create an overview of the personal stats. A desktop and mobile version is on the way too.*

Ravenous
http://ravenous-codecademy-project.surge.sh/

*Ravenous was a required Codecademy's project, made in **React** communicates with **Yelp's API** and fetches informations about restaurants and places to visit.*

Jammming
http://jammming-codecademy-project.surge.sh/
REFERENCE: http://jammming.s3-website-us-east-1.amazonaws.com/

*Jammming was a required Codecademy's project too. It's also made in **React** and communicates with **Spotify's API**. Differently from Ravenous, I have been working on it with very little support from Codecademy.*

AVAILABILITY:

I'm **ready to start working immediately** either **part-time** and **full-time**. Happy to work remotely too.

I can also offer to work pro-bono while I'm still learning and not fully independent.

WHAT YOU CAN EXPECT FROM ME:

I tend to stay a long time in companies I like, if that's gonna be the case with you, be sure to have me on-board for the next 2+ years minimum.

I understand that hiring someone in an early-stage like me may need more resources than someone more experienced, but you can be sure it's gonna be a good investment, my skills will improve drastically in the next years.

In a bit more than 6 months while having 2 jobs I turned from zero coding experience to building my first web-apps, now that I'm studying full-time who knows how much more resourceful I can be till the end of this year.
